

HTTP Connections

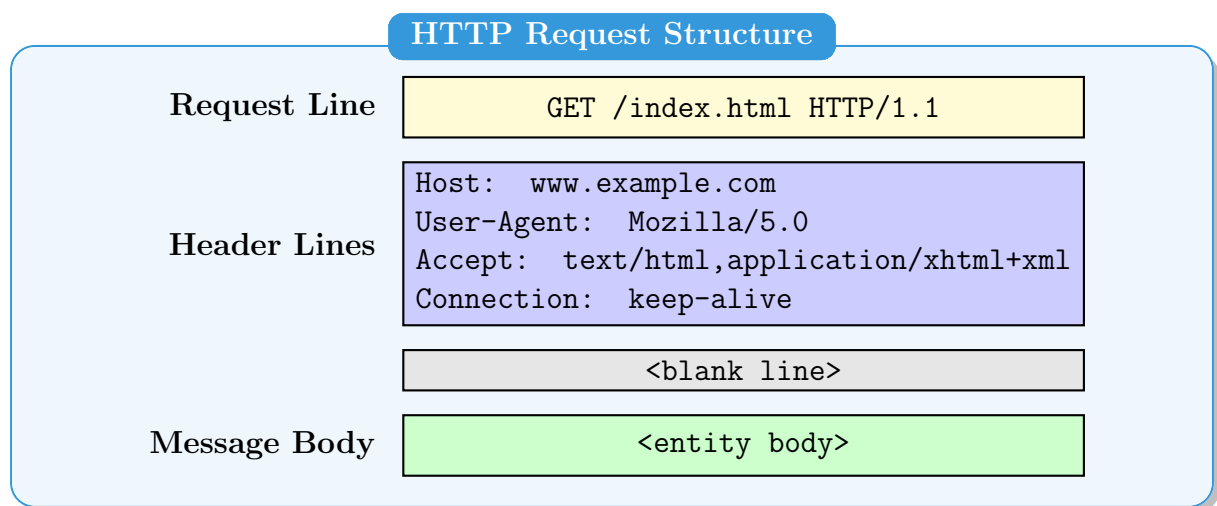

Message Formats, Methods & Status Codes

1 HTTP Message Format

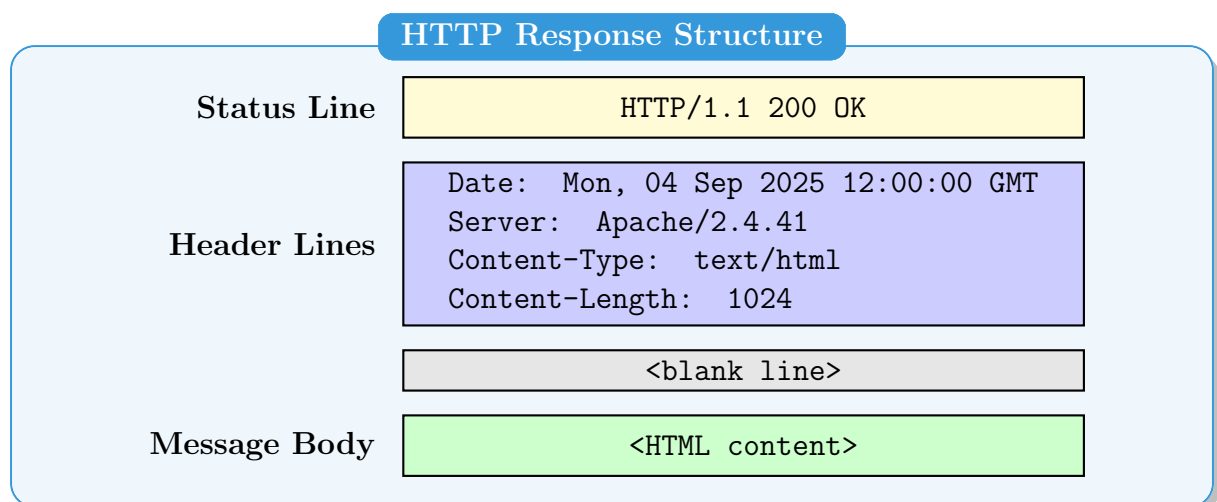

HTTP uses **text-based messages** to communicate between clients and servers. Each HTTP message consists of:

- **Start Line:** Request line (client) or status line (server)
- **Header Lines:** Meta-information (Host, User-Agent, Content-Type, etc.)
- **Blank Line:** Separates headers from the message body
- **Message Body:** Optional content (HTML, JSON, files)

1.1 HTTP Request Message

1.2 HTTP Response Message

2 HTTP Methods and Status Codes

2.1 Common HTTP Methods

HTTP Methods

Method	Description
GET	Retrieve information from server (most common)
POST	Submit data to server (forms, file uploads)
PUT	Upload/replace a resource on server
DELETE	Remove a resource from server
HEAD	Get headers only (no message body)
OPTIONS	Get information about available methods

2.2 HTTP Status Codes

HTTP Status Codes

Code	Status	Description
200	OK	Request succeeded
301	Moved Permanently	Resource has moved
400	Bad Request	Invalid request syntax
401	Unauthorized	Authentication required
404	Not Found	Resource doesn't exist
500	Internal Server Error	Server error occurred
